

## Job Title: Inkjet Applications Engineer

ImageXpert is looking for brilliant, outgoing applications engineers with inkjet experience who are interested in meeting decision makers and providing creative solutions for some of the largest companies in the world.

ImageXpert makes innovative machine vision tools, which are used for R&D and quality assurance in a variety of industries. While we've been in business for over 20 years, our applications engineers enjoy a startup-like work environment, with minimal process, flexibility, and the freedom to implement new ideas.

High performing employees control their own work experience - setting their own schedule, travelling internationally, and having limited management interference. Regardless of age or background, if you are good it will be noticed.

### Our Applications Engineers:

- Work with a small team to invent world-class machine vision tools, using ImageXpert proprietary software on OS X, integrated with a variety of hardware tools, including cameras, linear stages, lighting sources, lasers, and more
- Travel up to 25% nationally and internationally (primarily to Europe), to attend trade-shows and provide customers with on-site installation, application engineering, and system training
- Use strong communication skills to discuss the capabilities of ImageXpert systems with potential customers, and provide direct support as needed
- Have the unique opportunity to be involved with all aspects of business, from inventing new products, to sales and marketing, to delivery and support
- Are self-starters, with the ability to work both with and without supervision

### Required Qualifications:

- Bachelor's degree in Computer Science or related area. Master's degree preferred
- Minimum 4 years of experience working professionally with industrial inkjet technology
- Experience with image processing or machine vision a plus

Located north of Boston in Nashua, New Hampshire.
